

ABSTRACT OF THE DISCLOSURE

A non adhesive, removable, reusable mounting method for inexpensively, simply and readily mounting, dismounting and remounting planar display articles upon a rigid, smooth, glossy backing surfaces, said surface having both greater length and width than the article or articles to be mounted, allowing for spacing between articles, comprising a set of four mounting corners cut from a flexible cling material upon a single carrier sheet, said sheet, which when bent in half will release the said corners with ease, said corners to be placed correspondingly (right angle to right angle) at each corner of the display article, the hypotenuse of each mounting corner overlapping and extending beyond the corner of the display article clinging to the backing surface at the area of extension, thereby bracing said article at the area of overlap.
